# MANASWINI PISIPATI

Associate Product Manager | AI Product | Data Science
California, USA | +971 329 5459 | manaswinipisipati95@gmail.com | LinkedIn

## PROFESSIONAL SUMMARY

Product-minded analyst with an M.S. in Data Science for Business and about five years in ERP systems, healthcare data and AI products. I work between business teams and engineers: understanding users and markets in depth, writing requirements clearly, and checking that features launch and perform as expected, then iterating. I build in Python and SQL, prototype machine learning and RAG products, and present technical results to non-technical stakeholders across cross-functional teams.

## SKILLS

**Product:** Product Development Lifecycle, Agile/Scrum, Roadmapping, PRDs, User Stories, Acceptance Criteria, Prioritization, Requirements Gathering, Stakeholder Management, Cross-functional Collaboration, Go-to-Market, Product Launch, Iterative Development, Product Strategy, User Experience (UX), User-Centered Design, Market Analysis, Marketing, Jira, Confluence
**AI/ML:** Machine Learning, Generative AI, LLMs, Agentic AI, RAG, GraphRAG, Human-in-the-Loop Evaluation, Predictive Modeling, scikit-learn, Statistical Modeling
**Technical & Data:** Python, SQL, R, TypeScript, Pandas, NumPy, Data Analysis, Product Analytics, KPI Analysis, Business Case Modeling, Dashboard Design, Power BI, Tableau, Excel, Git, Docker, CI/CD, AWS, Playwright
**Communication:** Technical Presentations, Technical Writing, Fluent English Communication, Problem-Solving, Critical Thinking, Investigative Analysis, Organizational Skills, Mentorship, Change Management

## EXPERIENCE

**Quabyt (Hendrix CX) | AI Product Intern** Jun 2026 – Present

- Work with product and engineering to turn agentic AI requirements and known failure modes into acceptance criteria and release-readiness checks before launch, and re-test performance as features iterate.
- Run a human-in-the-loop review of LLM output: I compare extracted values against the source PDFs and flag hallucinations and answers that aren't grounded.
- Write Playwright and Playwright-BDD tests in TypeScript for key workflows, with smoke and regression tags, page objects, retries and traces.
- Create checks for MEP commissioning and AI extraction data, from dashboards and HVAC instances to schedules and JSON/CSV files.

**Portland State University | Student Program Assistant & International Student Advisor** Apr 2024 – Jun 2025

- Led outreach and marketing campaigns for study abroad programs, working with several university offices to get them done.
- Studied student engagement data to help plan next steps, and advised incoming international students as they adjusted to campus life.

**Accenture | Application Development Analyst, Hyderabad** May 2017 – Feb 2020

- Wrote functional and technical specs for Procure-to-Pay and Order-to-Cash in Oracle EBS, then supported the move to Oracle Cloud.
- Was the go-between for business users, developers and testers. Ran UAT, tracked defects, investigated root causes, confirmed fixes, and brought in HP UFT regression tests to catch issues earlier.
- Wrote SQL for validation, reporting and reconciliation, and used Python, Excel and Power BI to analyze operational and healthcare data.

## PROJECTS

**AI Support Triage Agent | Python, pytest, Git** Personal project

- Prototyped a support agent that keeps a human in the loop: it classifies requests, pulls from approved knowledge and escalates what it can't handle. A golden evaluation suite measures how often it gets intent, action and escalation right.

**AI Healthcare Knowledge Retrieval | GPT-4, Mistral, RAG, GraphRAG, Neo4j, ChromaDB** Academic project

- Built a RAG/GraphRAG prototype that links conditions, medications and treatments so search understands context, then checked its answers for accuracy.

**Capstone Project: OneApp Guarantee Housing Model | Python, SQL, Power BI, Machine Learning** Portland State University

- Used AI/ML and statistical modeling to predict tenant default risk from Census, Eviction Lab and economic data. Dashboards showed rent burden above 30% as the main driver, and I gave a technical presentation of the findings and recommendations to stakeholders.

## EDUCATION

**M.S., Data Science for Business (BI & Analytics) | Portland State University, Oregon** Jul 2025

**B.Tech., Computer Science | GITAM University** 2017

## CERTIFICATIONS & RECOGNITION

AWS Certified Cloud Practitioner | Oracle Procurement Cloud | Google AI Essentials | IDC Pinnacle Award (Accenture) | Star of the Month | Oregon State Scholarship (2024)
